

SABRE SAW SAFETY INSTRUCTIONS

1. The student should check that the switch is in the off position before plugging the sabre saw into the power outlet.
2. The student should check that the proper blade is being used for the cut and that it is properly installed.
3. The student should place the saw base plate firmly on the material to be cut before turning on the power.
4. The blade must not touch the material when the power is turned on. Turning on the power with the blade touching the material can break the blade.
5. Do not cut the radius so small that it binds or bends the blade. This may cause the blade to break.
6. Do not saw into the supporting work surface.
7. The student must check that there is sufficient electric cord length to complete the cut.
8. The student must make sure that the blade does not come into contact with the cord during the cutting operation.
9. Be sure the saw is unplugged from the power source before changing blades or doing any adjustments to the sabre saw.

If you are apprehensive about using this machine, have the instructor assist you.

Always wear approved eye protection while operating this machine.
